epiq 3.1.07.00BL
Release Note for Feature Release

1. What's New in this Version

We introduced new features & changes across the docs-iq, assure-iq, and learn-iq modules, along with fixes for known issues. These updates improve functionality, accelerate access to information, and streamline workflows. Details are provided in the New Features, Changes, and Issues Fixed sections.

2. New Features

Feature	Description	Other Menus Impacted by the New Feature	Additional information
assure-iq			
Phase-wise Target Date and Extension of Target Date (ETD) Configuration for Phases in the Process	New functionality 'Phase-wise Target Date and ETD Configuration' is introduced to enable structured, phase-wise management of the required process by defining phases with multiple forms and applying a common target date for each phase. It ensures controlled timelines, allows configurable Extension of Target Date (ETD) where required, and maintains consistency across all forms within a phase also ETD will propose w.r.t to required Phases.	N/A	• If the target date for a phase-related form is exceeded, an ETD request must be initiated and approved. The approved ETD target date will apply to all forms within the phase. • In process configuration, options for Phase selection, Phase Duration and Extension Required – Yes/No are

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			provided for each stage. • System restricts if the Phase wise Target exceed the Main Process Target Date.
docs-iq			
Restriction on Issuance of Re-Printed Documents for Pre-Deployment Records.	This feature introduces a control to restrict the issuance of re-printed documents for records that were created before the deployment of the new solution. The objective is to prevent uncontrolled or duplicate issuance of older documents and ensure data integrity and regulatory compliance. The system will determine the applicability of this control based on the document creation date relative to the deployment date. the system provides a configuration setting called 'Allow Issuance of Re-Printed Documents for Pre-Deployment Records.'	Reprint Request, Document Movement Issuance, Document Movement Retrieval Request.	A central configuration option will be available to control this behaviour. The configuration label will be 'Allow Issuance of Re-Printed Documents for Pre-Deployment Records' with Yes / No options. Yes: Allows issuance of re-printed documents for records created before deployment. No (Recommended Default): Blocks issuance of re-printed documents for records created before deployment.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			The system will identify pre-deployment records based on their creation date and time relative to the solution deployment date. Records created after deployment will follow the newly implemented controlled issuance process. When the configuration is set to No, only newly raised reprint request transactions will be available for processing in Issuance and Retrieval Initiation. Any reprint transactions already in progress prior to enabling this configuration will continue their workflow without interruption.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
Add Designation from SSO to DIQ as Binding Field in PDF Table Generator.	This feature introduces the Designation field from the SSO profile as a binding field in the PDF Table Generator. The designation will be available for configuration in document templates such as Header, Footer, and Front Approval Page. This ensures that the user's designation is displayed on signed documents, maintaining consistency with legacy documents and supporting compliance requirements.	PDF Table Generator Audit Trails, Generic Template Audit Trails, Document Previews wherever Designation binding fields configured.	The Designation field will be added to the binding field list in the PDF Table Generator. The designation value will be fetched from SSO, similar to how the Role field is currently retrieved. The field can be configured in the following path: Configuration → Initiate → PDF Table Generator → Format Type → Footer / Header / Front Approval Page. When configuring a table cell in the PDF template, Designation will appear as a selectable binding field. Once configured, the system will automatically display the designation in the respective section of

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			the generated document. The designation information will be captured and displayed across all relevant stages of the document lifecycle where it is configured.
Mandatory Remarks and Reasons Entry During Review and Approval.	This feature introduces a configurable option to control the behaviour of Remarks and Reasons fields during the document review and approval process. Currently, the system auto-populates these fields with "—". With this enhancement, organizations can choose whether the system should continue auto filling the fields or require users to manually enter remarks and reasons. This ensures that approvals contain meaningful justifications and supports compliance with documentation standards.	Preparation Stage – Review, Approval and It's Audit Trail.	A configuration option will be available under Configurations →Document Type Configurations → Preparation Configuration named 'Auto Loading of Remarks/Reasons.' The configuration will provide two options: Yes and No. Yes: The system will automatically populate "—" in the Remarks and Reasons fields during review and approval. Users will still be able to edit the fields before submission.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			No: The Remarks and Reasons fields will remain blank and become mandatory for the user to complete before submission. If submission is attempted without entering remarks or reasons when the configuration is set to No, the system will display the validation message: "Remarks/Reasons are mandatory." Help text will be provided for better user understanding: Yes: "System auto-populates '—' during review and approval." No: "User must manually enter remarks/reasons (mandatory)." This configuration will apply only to the Preparation stage

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			review and approval stages.
Re-print should not be allowed for already retrieved documents once before / after new version is published.	This feature introduces a control to restrict the re-printing of documents that have already been retrieved, especially when a newer version of the same document is published. The objective is to ensure that only the latest active version of a document is available for printing or issuance, thereby maintaining proper version control and supporting compliance requirements. New control has been introduced to manage the 'Allow Controlled Re-print of Retrieved Documents' in Central Configuration. If configuration set as 'Yes': At Reprint Request records should not be displayed once after Retrieval Task completion, restriction is provided at Reprint Request Screen. If configuration set as 'No':	Reprint Request, Reprint Request: Active Documents, Reprint Request: Obsolete Documents Reprint Request: Inactive Documents.	A central configuration option named 'Allow Controlled Re-Print of Retrieved Documents' will be available with Yes / No options. No: System allows re-printing of retrieved documents as per the current functionality. Yes: System restricts re-printing of documents once all associated retrieval tasks are completed. This configuration can be set only once and cannot be modified later. If the retrieval tasks associated with a print request are not yet completed, users will still be able to raise a reprint request for that print request.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
	Once after Retrieval Task completion also able to raise Reprint Request.		Once all retrieval tasks are completed, the corresponding print request record will no longer appear in the Reprint Request screen. When attempting a re-print, the system will validate whether a newer version of the document has been published and apply the configured restriction accordingly to ensure proper version control.
Capture and Control 'Reprint Request Valid Upto Date' in Reprint Request Workflow.	This feature introduces a 'Reprint Request Valid Upto Date' field in the Reprint Request workflow. The field ensures that each reprint request has a defined validity period, making the authorization time-bound and traceable. This helps maintain stronger document control and supports audit and compliance requirements.	Reprint Request Initiation, Reprint Request Approval, Reprint Request Re-Initiation and Reprint Request Audit Trail These screens will capture and display the Reprint Request Valid Upto Date as part of the transaction details.	A new field labelled 'Reprint Request Valid Upto Date' will be added to the Reprint Request transaction screen. The field will load without a default value, requiring the user to select a date. Users will not be allowed to select a past date.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			The current system date will be the minimum selectable date. If a past date is selected, the system will display the validation message: 'Selected date must be greater than or equal to Current Date.' The system will prevent saving the transaction until a valid date is selected. The selected date will be stored as part of the Reprint Request transaction and recorded in the Audit Trail. The Valid Upto Date will also be visible in all relevant approval screens. For existing reprint request records where this field was not previously available, the system

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			will display a derived Valid Upto Date calculated as 10 days from the initiation date. This derived date will be displayed for reference in transaction, audit, and approval screens.
Issuance Code Filter in Reprint Request Transaction Screen	This feature introduces an Issuance Code filter in the Reprint Request transaction screen. It allows users to quickly search and locate specific documents using the issuance code when raising reprint requests. This enhancement improves efficiency by reducing the need to manually browse through large lists of records.	Reprint Request Initiation, Reprint Request Approval, Reprint Request, Re-Initiation, Reprint Request Audit Trails, Reprint Screens.	Additionally, the 'Issuance Code' column and filter are also available in Reprint Request: Active Documents, Reprint Request: Obsolete Documents, and Reprint Request: Inactive Documents. For records where the 'Issuance Code' is not available, the column will be displayed as empty by default when the screen loads.
Issuance Code Filter in After	This feature adds an Issuance Code filter to the	After Print Retrieval Task Screen.	The system will introduce a new filter

Feature	Description	Other Menus Impacted by the New Feature	Additional information
Print Retrieval Task Screen	After Print Retrieval Task screen. The filter allows users to quickly search and retrieve specific records using the issuance code, reducing the need to manually browse through large lists of documents. This enhancement improves search efficiency and user productivity.	CFT Task, Training Task, Acknowledgement Task, and Before Print Tasks (Initiation, Re-Initiation, and Approval screens).	field labelled 'Issuance Code' in the filter section. Users will be able to search using partial issuance code values. The filter will support exact match and partial (wildcard) search. When the filter is applied, the system will display only the records that match the entered issuance code. The new filter will function along with existing filters without affecting current filtering behaviour.
Separate Reprint Request Menus for Active, Inactive, and Obsolete Records	This feature introduces separate menu options for Reprint Request – Active, Reprint Request – Inactive, and Reprint Request – Obsolete documents. Currently, all records appear under a single Reprint Request section. By separating the menus based	Reprint Request – Active Reprint Request – Inactive Reprint Request – Obsolete These menus will function similarly to the existing Print Request	The system will introduce three separate menu options instead of a single Reprint Request section. Each menu will display only the documents corresponding to that

Feature	Description	Other Menus Impacted by the New Feature	Additional information
	on document status, users can easily locate and manage reprint requests without manually filtering through mixed records.	Active / Inactive / Obsolete structure.	specific status (Active, Inactive, or Obsolete). The system will automatically categorize documents based on their current status and display them under the appropriate menu. Navigation between these menus will follow the existing menu structure and user experience used for Print Requests. User access controls will remain unchanged, ensuring users only see records they are authorized to access.
Update Reviewer Action Label in Front Approval Page	This feature updates the action label displayed on the Front Approval Page to clearly differentiate between reviewer and approver actions. When a user performs a review action, the system will record it as	Front Approval Page Document View / Generated Document Output (PDF or Print), Document Tasks List Screen, Preparation E-Sign Window, After Preparation	This change is only a label update for Preparation Review Activities. For existing in-progress records, the action will continue to be displayed as

Feature	Description	Other Menus Impacted by the New Feature	Additional information
	'Reviewed' instead of 'Approved.' This change ensures accurate representation of user roles and improves clarity for audit and compliance purposes.	Confirmation, Audit Trails, dashboards, Work Transfer, Document Status Report, Mail Notification, Pendency's, E-Form Manager (Work Allocation Mapping), CFT Task and Training Task Initiation stage. These areas will reflect the updated action label based on the user role.	'Approved'. If these records are returned and re-initiated, the system will update the action label and display it as 'Reviewed'.
Tracking of Associated Document Details in Training Task and Audit Trail	This feature enables the system to capture and display associated document details along with the main document information in the Training Task transactions. It also ensures that these details are recorded in the audit trail to maintain complete traceability of training records. This enhancement supports compliance and audit requirements by providing a clear history of	Training Task Initiation, Re-Initiation, and Approval Audit Trails screens.	The Training Task eForm will display both main document details and associated document details. Associated documents linked to the main document at the time of training initiation will be automatically fetched by the system. The 'View' hyperlink will be displayed

Feature	Description	Other Menus Impacted by the New Feature	Additional information
	document associations linked to training activities.		against each associated document. Associated documents will be tracked in the Audit Trail and will be available to users in read-only mode. This enhancement will not impact the existing training completion logic or workflow processes.
Configurable Restriction on De-selecting Pre-selected Training Task	This feature provides a configuration option that allows organizations to control whether users can de-select pre-selected training tasks associated with a document. By default, training tasks will continue to load as pre-selected. However, administrators can enable a restriction to ensure mandatory training tasks cannot be removed by users, helping maintain compliance and training governance.	Document Type Configuration, Document Preparation Initiation and Re-Initiation, Publish Through Transfer Initiation, Document Transfer Initiation and Re-initiation These areas will reflect the configured behaviour for allowing or restricting the de-selection of training tasks.	Training tasks will continue to load as pre-selected by default, maintaining the current system behaviour. A new configuration option 'Restrict Training De-Selection' will be available at the Document Type Configuration level with Yes / No options. The configuration will apply document type-wise.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			When the configuration is set to Yes, users will not be able to de-select the pre-selected training tasks, and the checkbox or control will be disabled. When the configuration is set to No, users can de-select the training tasks as per the existing functionality. If a user attempts to de-select training tasks (when allowed), the system will display a confirmation message: 'You have unselected one or more training tasks. Do you want to continue?' with Yes / No options. Yes: The system will proceed and allow the transaction with the unselected training task(s).

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			No: The system will remain on the same screen and allow the user to review or reselect the training task(s).
Binding of Department Name, Plant Code, and Plant Name in Document Header & Footer.	This feature enables users to bind Department Name, Plant Code, and Plant Name in the header and footer sections of generated documents. Currently, only 'Department Code' can be displayed. With this enhancement, organizations can display more meaningful and user readable information in documents, improving clarity and meeting audit and documentation standards.	Configuration → PDF Table Generator / Header & Footer Configuration, Generic Templates, Document Preparation Request, Preparation, Publish and Print binding fields. These areas will display the configured binding fields in generated document outputs.	The system will allow binding of Department Name, Plant Code, and Plant Name in addition to the existing Department Code. The current functionality for Department Code binding will remain unchanged. During header/footer configuration, users can choose to display Department Code or Department Name as required. The selected binding fields will be reflected correctly in document preview, published documents, and printed outputs.

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			The Department Name displayed will match the value configured in the Department Master. Existing documents will not be impacted unless the header or footer configuration is modified. The enhancement will continue to follow the existing access controls and document type configurations.
'View' Hyperlink in Obsolete Documents Report.	This feature introduces a 'View' hyperlink in the Obsolete Documents Report to allow users to quickly access and review obsolete document details. The document will open in read-only mode, enabling users to refer to historical information for audit, reference, and compliance purposes without allowing any modifications.	N/A	Each record in the Obsolete Documents Report will display a 'View' hyperlink. Users will not be able to edit, revise, or change the status of obsolete documents from this screen. This enhancement will not change the existing behaviour of how obsolete documents are

Feature	Description	Other Menus Impacted by the New Feature	Additional information
			managed in the system.

3. Changes

Change	Description	Other Menus Impacted by the Change	Additional information
assure-iq , docs-iq & learn-iq			
.NET Core 3.1 to .NET 9	The application framework has been upgraded from .NET Core 3.1 to .NET 10. This upgrade brings: • Enhanced security • Access to the latest features • Long-term support capabilities Overall, this ensures a more stable, secure, and future-ready platform.	N/A	N/A
Allow Modifications to User Details in SSO While Preserving Historical and Audit Integrity	In the User Details Modification functionality of the SSO application, the fields First Name, Last Name, User ID, and Employee ID are now enabled for modification. This enhancement allows authorized users to update these key user details whenever necessary to maintain accurate user information. The changes made in the SSO application will be automatically reflected for the	N/A	• The Active Directory(AD) user detail modifications (First Name, Last Name, User ID, and Employee ID) will be reflected in the respective modules only after the User Detail Modification is

Change	Description	Other Menus Impacted by the Change	Additional information
	respective users in the assure-iq, docs-iq, learn-iq and Report Engine module and all modifications performed in these fields will be captured and maintained in the Audit Trails		submitted in the SSO application. • If AD user ID is modified, System will restrict the user to login to the application until User Detail Modification is submitted in the SSO application. • When a native user's User ID is updated in SSO, the user can accept or reject it by logging into SSO or epiq. If accepted, the user must update the password and can then log in using the new User ID. • In learn-iq, if the user details such as First Name, Last Name, or Employee ID are modified for an employee whose

Change	Description	Other Menus Impacted by the Change	Additional information
			Job Responsibility initiation/ modification is pending with approval, and the respective user has accepted the changes meantime, then during the approval stages (1st Approval / User Acceptance / Authorized Deputy Approval), only the "Return" option should be available. This is also applicable if the Reporting To or selected Authorized Deputy details of the respective employee are modified. • In docs-iq for completed transactions, the system will continue to

Change	Description	Other Menus Impacted by the Change	Additional information
			display the old Name that existed at the time the action was performed in transaction list screen, reports, and audit trails. This preserves historical accuracy and traceability • For in-progress records application will display the latest updated user name or User ID in on-screen lists, to avoid confusion. • Additionally, all synchronization activities between SSO and epiq are captured in audit logs, including the old value, new value, modified user, and timestamp of the

Change	Description	Other Menus Impacted by the Change	Additional information
			change, ensuring complete traceability.
learn-iq			
An option to configure the 'learn-iq Forum' has been provided in the application.	A new configuration enhancement has been provided for the 'learn-iq Forum' as 'Enable learn-iq Forum for Queries/Clarifications', with 'Yes' or 'No' options. Based on the configuration set in Central using the Default User, the 'learn-iq Forum' button will be visible on the Home Screen of the application.	N/A	In Global Profile Registration and Modification, the 'Queries and Clarifications' report menu will be displayed and available for selection based on the central configuration set with default user. For existing records, if the configuration is set to "No" and the respective menus are not required, the Global Profile should be modified accordingly if they were previously selected.
An option to configure to upload the 'Training Certificates' during External	A new configuration enhancement has been introduced for uploading training certificates during External Training Registration, Modification, and Re-initiation, named 'Uploading of	N/A	N/A

Change	Description	Other Menus Impacted by the Change	Additional information
Training object model transactions has been provided in the application.	Training Certificates at External Training', with 'Mandatory' and 'Optional' options. Based on the configuration set in Central with Default User, the option to upload Training Certificates will be applicable during External Training object transactions.		
The caption 'External Certificates' has been renamed to 'File Attachments' in the Job Responsibility object model screens and the corresponding reports.	The caption 'External Certificates' has been renamed to 'File Attachments' in the Job Responsibility object model screens and in the related reports, including the 'Job Responsibility History Report' and the 'My Job Responsibility' report.	N/A	This caption change is applicable to existing records, including already initiated records in the Audit Trails and Reports, and will also be reflected across the remaining screens of the Job Responsibility object wherever records exist.
The sequence of fields in the Offline Question Paper printed copy has been updated.	The printed copy of the Offline Classroom-type Session Question Paper for any batch has been updated to display the fields in a revised sequence for better clarity and alignment. The fields are now displayed in the following order: Course Name, Course Session Name, Batch Name, Employee Name, Employee ID, Designation, Department, Note, Employee	N/A	N/A

Change	Description	Other Menus Impacted by the Change	Additional information
	Signature/Date, Maximum Marks, Qualifying Marks, Qualifying Percentage, Marks Obtained, Evaluator Name, Evaluator Signature/Date, and Remarks/Reasons.		
Incorrect trainee statuses are being tracked in the Date Wise Course Sessions, Individual Employee Report (All), Unplanned Training Report screens across multiple scenarios.	Previously, multiple combinations and conditions were used to track trainee statuses in the trainee info table, leading to key issues affecting both data accuracy and system performance. This resulted in inconsistencies between the displayed data and the actual trainee statuses in the Date Wise Course Sessions Report, Individual Employee Report (All) Report, Unplanned Training Report. This issue has now been resolved. A new trainee info table has been created to track the latest trainee statuses from the existing one. This ensures that trainee counts and statuses are updated accurately on the front end across the mentioned screens. Additionally, the relevant backend subroutines have been modified accordingly. A separate document EPIQ3.1.07.00BL-RCD-LEIQ-NDI-01 will be shared with	N/A	N/A

Change	Description	Other Menus Impacted by the Change	Additional information
	comprehensive details on the new design implementation.		
assure-iq			
Selective Return Functionality Enhancement	Previously, when users performed a Selective Return between intermediate stages or from an intermediate stage back to the Issue Login stage or required stages, the system auto-selected multiple intermediate stages unnecessarily. This enhancement improves the logic so that the system selects only the required dependent stages based on the user's selected stage	N/A	• In the Standard Market Complaint (MC) Process, the Additional Information task must be completed before the QA Decision stage. • The system will display checkboxes for In-progress stages, but selecting them is restricted and the alert 'Cannot return the transaction to InProgress work items' • If non-dependent stages are selected while initiating Selective Return, the system will display an alert like, "No dependent stages

Change	Description	Other Menus Impacted by the Change	Additional information
			were identified for the selected return stage. • When selective return is initiated between two independent tasks (example MC OTD to Additional info or vice Versa) both independent tasks will appear parallelly • Selective Return functionality will work based on process configuration stage dependencies.
Addition of new column 'In-Charge Department' in the Action Plan Table in Status Report/log report	In the Status/Log report, a new column 'In-charge Department' has been added in the Action Plan table. This information is fetched directly from the respective Action Plan records proposed during the transaction, allowing users to easily identify the department responsible for the Action Plan.	N/A	N/A

Change	Description	Other Menus Impacted by the Change	Additional information
docs-iq			
Allow Role Level to Accept 3 Digits After Decimal.	This feature allows the Role Level field to accept and display numeric values with up to three digits after the decimal point (99.999). Previously, the system allowed only 2 digits after decimal precision.	Role Audit Trails	N/A
Include Department (PR Department), Print Valid Upto, and Plant Name in Retrieval Log Report	Department (PR Department), Print Valid Upto, and Plant Name columns are added to the Retrieval Log Report to provide improved visibility and traceability of retrieved documents. Department is automatically populated based on the department associated with the retrieved documents. Print Valid Upto displays the document's validity end date as defined during document Print Request. Plant Name is fetched from the site configuration linked to the respective documents.	N/A	N/A

4. Issues Fixed

Issue	Description	Other Menus Impacted by the Issue Fix	Additional information
learn-iq			
The reinitiated Job Responsibility record is not available for approval for previously approved ADs (Authorized Deputy's).	Previously, Registration/ Modification re-initiated Job Responsibility records were not available for approval by previously approved ADs (Authorized Deputies). This issue has now been fixed. The re-initiated JR records are now available for approval to all selected AD users, and the transaction is submitted successfully.	N/A	N/A
The Job Responsibility record is displayed directly for 'Authorized Deputy' acceptance even though the 'Self-Acceptance' approval of the respective user is not completed.	Previously, Job Responsibility records (registered/modified/re-initiated) were displayed in the 'Authorized Deputy (AD)' acceptance screen even without self-acceptance approval. This issue has been fixed now. When both 'User Acceptance' and 'AD Acceptance' are configured, the record will be available for AD acceptance only when the user self-acceptance has been completed.	N/A	N/A
The selected documents are not displayed on the Document Reading	Previously, the documents selected during the Document Reading course session were not displayed on the 'Document	N/A	N/A

Issue	Description	Other Menus Impacted by the Issue Fix	Additional information
Termination – Document Reading Course Session screen.	Reading Termination – Document Reading Course Session' screen after clicking on the respective session name. This issue has been fixed now. The documents which are selected during course session registration will now be displayed accurately in the termination screen.		
'The 'Unique Code' search filter is not working in the External Training Status Change screen.	Previously, the 'Unique Code' search filter was not functioning in the External Training Status Change screen. This issue has now been fixed. All available search filters are working accurately on the External Training Status Change screen.	N/A	N/A
For online classroom batches (without assessment) where attendance has been completed, the completion details related of unscheduled sessions are not displayed in the Training Schedule – Course-wise and Subgroup-wise reports.	Previously, for online classroom batches (without assessment) when the attendance is completed, completion details related to unscheduled sessions were not displayed in the Training Schedule – Course-wise and Training Schedule Subgroup-wise reports. This issue has now been fixed. The completion details are now displayed accurately in the respective reports.	N/A	N/A
assure-iq			

Issue	Description	Other Menus Impacted by the Issue Fix	Additional information
Action Plans are still visible in the individual ETD Initiation list screen even after initiating force closure for the main process along with the Action Plans	Previously, Action Plan were displayed at ETD initiation even after initiating force closure for the main process along with the Action Plans This issue has now been fixed. Now, Action Plans related to Force closure Issue Codes will not be displayed	N/A	N/A
Action Plans proposed in Market Complaints(MC) Preliminary Investigation Approval are not displayed in the Market Complaints Process Force Closure Initiation screen.	Previously, Proposed Action Plans at MC - Preliminary Investigation Approval are not displayed in the Force Closure Initiation screen. This issue has now been fixed. Now, proposed Action Plans will be displayed in the Force Closure Initiation screen.	N/A	N/A
'Initiated By' column is not displayed in the File Attachment window on the Internal Audit Finding Proposal and Internal Audit Response screens	Previously, 'Initiated By' column is missing in the File Attachment window on Internal Audit screens. This issue has now been fixed. Now, Initiated By column will be displayed in the screen	N/A	N/A
docs-iq			
For Retrieval Task Pending alert is displayed.	Previously, the Retrieval Task status was incorrectly displayed as 'Pending' after completing the	N/A	N/A

Issue	Description	Other Menus Impacted by the Issue Fix	Additional information
	print process for documents configured with IQM and retrieval tasks. An issue has been resolved now, upon successful completion of the print and retrieval workflow, the system correctly displays the status as 'N/A'.		
Reprinted document does not appear in the Retention Period Documents report, even though a retention period is configured.	Previously, reprinted documents were not appearing in the Retention Period Documents report, even when the retention period was configured during document movement. Now an issue has been fixed where, reprinted documents are correctly included in the Retention Period Documents report based on the configured retention settings (Yes/No/Lifetime).	N/A	N/A

5. Dropped Features

N/A

6. Testing

This release has been tested internally as per the applicable procedures for testing and release of epiq 3.1.07.00.

The maintenance releases of the earlier version 3.1.06.00(3.1.06.01, 3.1.06.02) have been integrated into the current version 3.1.07.00 and tested internally in accordance with the applicable procedures for testing and release of epiq 3.1.07.00.

7. Limitations

docs-iq

I. The Issuance Code field in list screens (Reprint Request Initiation, Re-Initiation, Approval, Audit Trails and Reprint screens) supports a maximum of 1000 characters for search input. Any value exceeding 1000 characters will not be processed by the system.

II. If a user's Designation is modified, the updated designation will not automatically reflect in the docs-iq module. The user details must be updated through User Modification and the User Product/Module Assignment in SSO. Once this process is completed, the latest designation will be synchronized and reflected in the respective binding fields in generated documents.

8. Recommended Practices

I. In Google Chrome or Microsoft Edge on Microsoft OS are recommended browsers for this version.

II. In Google Chrome, the password save option will be enabled by default. The user must disable it manually (Browser Property)

III. The latest Caliber Common Client Print(CCC) component should always be set to run in the background for viewing attached documents and printing.

IV. The mail executable (Mail.exe) should always be set to run.

V. In case of Session time out is modified, Application pool (IIS) of the modules and epiq should be restarted.

VI. When registering or modifying a plant, the application pool of epiq and its respective modules should be restarted.

VII. All modules of epiq should be synchronized to the same version/service pack number.

VIII. The customer admin team should create the Object Storage folder on the application server and grant access permissions to the configured IIS User in the application pool and folder backup will be maintained by the admin team as per their internal policy.

assure-iq

I. If there are any configuration changes in assure-iq, configuration reset must be performed.

9. Migration Possibilities

I. Organizations using stand-alone learn-iq versions with one or multiple plants and without any earlier customizations will first have to synchronize the user list of both the applications before being migrated to the epiq platform along with master data.

II. Client organizations using customized earlier versions of any of the three applications can implement fresh instances for one or more epiq modules if earlier customized features can be added at a later phase.

10. System Requirements

10.1 Server Requirements

Production Single Server Environment:

Hardware & Software Specifications		
Production Environment		
	Application and Database Server - 1 No.	
Hardware Specifications	**Item / Component**	**Specifications**
	Processor type	Recommended: Intel Xenon gold 4th generation 8 Core processor or higher to be scalable
	Processor speed	Recommended: 3.4 GHz or higher
	Memory	Recommended: 64 GB or higher
	Hard Disk	Recommended: 2 * 500 GB and 1TB (2TB and extendable)
	Network Card	LAN Adapter or NIC (Network Interface Card)
		Min 100 Mbps
Software Specifications	Operating System	Windows 2019 server (64 bit) or higher
	Internet Information Services (IIS)	IIS 10
	Internet software	Latest Chrome\Microsoft Edge
	.Net Framework	.Net Core 9
	Data Base	SQL 2019 standard (processor-based license) or higher New installations via InstallShield, SQL Server 2022 or higher version is recommended
		SSRS

Production Multi Server Environment:

Hardware & Software Specifications		
Production Environment		
	Application and Database Server - 2 No.	
Application Server		
Hardware Specifications	**Item / Component**	**Specifications**
	Processor type	Recommended: Intel Xenon gold 4th generation 8 Core processor or higher to be scalable
	Processor speed	Recommended: 3.4 GHz or higher
	Memory	Recommended: 24 GB or higher
	Hard Disk	Recommended: 1 X 500 GB
	Network Card	LAN Adapter or NIC (Network Interface Card)
		Min 100 Mbps
Software Specifications	Operating System	Windows 2019 Server (64 bit) or higher
	Internet Information Services (IIS)	IIS 10
	Internet software	Latest Chrome\Microsoft Edge
	.Net Framework	.Net Core 9
Database Server		
Hardware Specifications	**Item / Component**	**Specifications**
	Processor type	Recommended: Intel Xenon gold 4th generation 6 Core processor or higher to be scalable
	Processor speed	Recommended: 3.4 GHz or higher
	Memory	Recommended: 64 GB or higher
	Hard Disk	Recommended: 500 GB and 1TB (1.5 TB and extendable)
	Network Card	LAN Adapter or NIC (Network Interface Card)
		Min 100 Mbps
Software Specifications	Operating System	Windows 2019 server (64 bit) or higher
	Date Base	SQL 2019 standard (processor-based license) or higher
		SSRS

Note: Mail services and IQM engine are required to be installed in the application server.

10.2 Client Requirements

HW & SW Specifications - Client		
	Hardware & Software – Client	
Hardware Specifications	**Item / Component**	**Specifications**
	Processor type	Recommended: Core 2 Duo or higher
	Processor speed	Recommended: 1 GHz or higher
	Memory	Min 2 GB, Recommended: 8 GB or higher
	Network Card	LAN Adapter or NIC (Network Interface Card)
	Monitor	Recommended screen resolution of 1024 by 768 pixels
	Network Bandwidth (User)	100 Mbps or higher
Software Specifications	Operating System	Windows 10 or above
	Document Software	Office 365
	Internet software	Latest Chrome\Microsoft Edge
	Caliber Common Client	CCC latest released version

10.3 Network Requirements

S. No.	Item / Component	Minimum Requirement
1.	Network Connection Speed	Minimum: 10 Mbps Recommended: 100 Mbps or more
2.	Recommended protocol at server level	HTTPS

11. GAMP Categorization

This baseline version of epiq 3.1.07.00 falls under Category Four of the GAMP Five guideline issued by ISPE.

12. Abbreviations

Definitions /Acronyms	Description
GB	Gigabyte
Https	Hypertext Transfer Protocol Secured
OS	Operating System
GHz	Gigahertz
TB	Terabyte
Mbps	Megabits per second
IIS	Internet Information Services
LAN	Local Area Network
S. No.	Serial Number
ISPE	International Society for Pharmaceutical Engineering
SSO	Single Sign-On
epiq	Enterprise Platform for Integrated Quality

13. Revision History

Revision No.	Revision Details	Revision Date
00	Initial Document	20-Mar-2026

14. Approval Signatures

Completion of the following signature blocks signifies the approver has read, understood, and agrees with the content of this document.

Caliber			
Activity	**Name**	**Role and Department**	**Signature and Date**
Prepared By	Naresh Asa	Sr. SQA Engineer - SPE	NARESH ASA Signed by NARESH ASA Organization: CALIBER TECHNOLOGIES PRIVATE LIMITED Date: 2026.03.20 20:06:21 Reason: Preparator Location: Hyderabad *Click here to verify the signature*
Approved By (QA)	Durga Praveen G	Sr. QA Lead - SPE	DURGA PRAVEEN GANDETI Signed by DURGA PRAVEEN GANDETI Organization: CALIBER TECHNOLOGIES PRIVATE LIMITED Date: 2026.03.20 20:12:53 Reason: Approver Location: Hyderabad, India *Click here to verify the signature*
Approved By (Product Owner)	Kashinath Dachineni	Product Owner - SPE	KASHINATH DACHINENI Signed by KASHINATH DACHINENI Organization: CALIBER TECHNOLOGIES PRIVATE LIMITED Date: 2026.03.20 20:17:19 Reason: Approver Location: Hyderabad, India *Click here to verify the signature*
